# WhyEvolveWood

- India is generating about 3.5 million tones of plastic waste annually and per capita plastic waste generation has almost doubled over the last five years.
- Around 60% of the generated plastic waste is reportedly recycled and remaining quantities were disposed in landfills or open dumps.
- Today, annual tree harvest vs. production on a world- wide scale shows that humans cut down approximately 15 billion trees a year and re-plant about 5 billion. That's a net loss of 10 billion trees every year, and a rate that would mean the loss of all trees within the next 300 years.
- As an initiative to reduce carbon foot print and plastic landfill, EVOLVE GROUP started making EvolveWood Composite, EvolveWood products will be environmentally friendly and are best substitute to wooden and plastic products.
- The environmental impact of EvolveWood is directly affected by the ratio of renewable to non- renewable materials.
- The commonly used petroleum-based polymers have a negative environmental impact because they rely on non-renewable raw materials and the non- biodegradability of plastics.
